

CONSOLIDATION - TECHNOLOGY IN THE NEWS : NITYA

PLUS - Things that are positive.	MINUS - Things that might be a challenge.	INTERESTING - Things I want to know more about.
There are many ways that technology has helped our society. Number one by making life easier for us, because communication has gotten so much easier. Remote working has also gotten easy to work with, and directions such as the GPS have also gotten easy to follow. The rise in technology has been very fast in the past century and it continues to rise, so we can expect a fully technological based future.	Although there are the pros of technology there are also cons of technology, such as. Since we expect a fully technological based future, we should know that once that happens the demand for jobs will eventually go down. Even further we can expect the need for no jobs, because we will see that the robots/technology will be doing daily jobs for us. We can also see that people these days are completely addicted to technology like it's their life, so we can try and imagine how addicted people can get when our future is all technology.	Although I have quite some knowledge about technology. There are many things that I want to know about this topic, starting with when can we expect a fully technology based future or if we are even going to have one? If we have a life like that upcoming, a question can be what do we expect our lives to look like. If we will continue doing our daily jobs or if that will be taken care of for us? There are multiple questions about the future and technology, but those are just the ones that make me the most curious.

After you have completed the chart, answer the following questions -

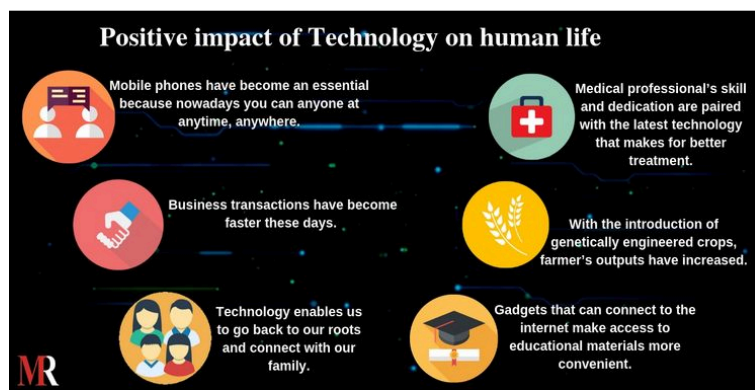

- 1. Summarize your video/article. State the main idea and at least three supporting details.**

The video I have chosen starts by summarizing and defining what technology is and its history. Then the video continues to talk about the positives of technology in society. The main message about the video was the technology can always be positive. It will just depend on how people adapt to it and use it, such as if we get way too addicted there will be consequences. Then the video talks about the negatives of technology, they state that

technology will always have its pros and cons. Then the video wraps up by advising us to use technology responsibly and to continue to educate ourselves on this topic.

2. Answer the following question: Is the technology in your article/video good for our society? Support your opinion with your own ideas and at least three points from your PMI chart.

Once again the video summarizes that technology will always be good for our society, but that depends on how we use it and adapt to it. Technology is good for society depending on how it is developed and how it is utilized. The good things about technology is that it is efficient, productive, sustainable, socially isolated etc. Therefore technology itself is neither good nor bad. It's a tool created by us for us to make our lives easier, efficient, and more convenient. However in the end the way we use technology can have both positive and negative impacts on society and individuals in the society.
